SalingerPrivacy

How do you build privacy into product design?

Agile projects need agile privacy advice.

We help our clients design privacy controls into products and systems from the start.

Our **Privacy Impact Assessments** can include integrated privacy advice, delivered early and often during ideation and design sprints.

Privacy Professionals Training – a suite of online modules

Deepen your knowledge, and develop your skills, with modules on topics including the 8 Privacy Design Strategies, Identifying and resolving privacy risks in projects, and Privacy by Design in privacy law.

Find out more about our eLearning and other training options at www.salingerprivacy.com.au/training/

The 8 Privacy Design Strategies

MINIMISE
By default, only the minimum amount of personal information should be collected, stored, and shared.

ENFORCE
Demonstrate compliance with documented enforcement of the rules, policies and procedures.

HIDE
Personal information should only be presented to view if necessary and authorised.

REGULATE
Rules, policies and procedures should be in place to ensure best practices are understood and implemented.

CUSTOMER DATA

SEPARATE
Where possible, processing and storage of data should be distributed.

CONTROL
Individuals should be given genuine ways to exercise choice and control over their personal information.

DE-IDENTIFY
Where possible, data should be stored, used or presented without identifying individuals.

INFORM
Individuals should be provided with clear and meaningful privacy communications about their information and privacy rights.

SalingerPrivacy

We know privacy inside and out.
